OUR COMPANY

More than 30 years of continuous work have positioned us as one of the regional leaders in national and international transport services.

We combine knowledge and skills to provide excellence in service, together with our characteristic responsibility and commitment.

Our operation centers are strategically located within the main Mercosur corridors, adding new locations year after year.

We have a homogeneous fleet made up of Volvo tractor units, thermal vans with Thermo King refrigeration equipment, container ships with Genset and semi-trailers.

In addition, we have strategic partners with their own units that operate with unique dedication, following the quality standards of our company.

Our value proposition requires continuous and concrete improvements, for which we ensure the quality of our services with certified processes under ISO 9001:2015 and USDA standards (to ship products throughout the United States).

OUR PILLARS

RELIABILITY

Willingness, commitment and responsibility at work.

We are committed to implementing procedures that allow us to count on processes of international management standards.

INFORMATION

The more reliable, opportune and complete the information is, the better the decisions taken by us and our clients will be, as well as the advice and level of service we can provide.

PROFESSIONALISM

We incorporated new information and communication technology (ICT) for the management and computerized control of the fleets and routes, as well as the transported goods.

SUSTAINABILITY

Our commitment to sustainability is directly reflected in the technology of the units acquired for our fleet. Internally, in the continuous improvement, innovation and adaptability.

ISO CERTIFICACIONES

NORMA ISO 9001:2015 REGULATION

Goals and benefits of counting on this certification:

- This regulation has allowed us to develop and improve organizational performance and constantly pursue high levels of service quality, always focusing on the client.
- Ability to provide services that satisfy customer requirements and applicable laws.
- Define and manage systematically the processes and their interactions to achieve the goals of the Tahan Company policy .
- Certifying this standard proves that Tahan Company gives its approval in process management, identifying and reducing risks in order to operate more efficiently and reach new markets, following the applicable legal requirements.

NORMA ISO 14001:2015 REGULATION

Goals and benefits of counting on this certification:

- The purpose of certifying this regulation is to provide a reference framework to protect the environment and respond to changing environmental conditions, in balance with socioeconomic needs.
- The Tahan Company decides to implement an Environmental Management System to put under control the way in which the organization designs, distributes, consumes and carries through with the final disposal of products and services, protecting the environment, through the prevention and reduction of adverse impacts.

NORMA ISO 45001:2018 REGULATION

Goals and benefits of counting on this certification

- The purpose of certifying this regulation is to provide a reference framework to manage risks and opportunities for Safety and Health at Work.
- The objective and expected results are: preventing workers from injuries and health damage related to work and providing safe and healthy workplaces. In consequence, it is of critical importance for Tahan Company to eliminate danger and minimize risks, taking prevention and protection measures, following the applicable legal requirements.
